PROFILE

My fuel is curiosity, for me it's common to let creativity take over and allow myself to create new things.

I entered the world of development with my first computer, I started creating script modifications for games and shortly afterwards I was developing my first applications for the web and desktop.

Today, my main specialty is in developing applications for Android, I have been working with the technology since 2015. Initially using Java in application development, however, I have recently been studying Kotlin.

EXPERIENCES

Project coordinator

(2023) Entrepreneurship Studies Center

- Participated in decision making
- Developed and delivered training
- Coordinated a team of six people on internal and external projects
