PROFILE

My fuel is curiosity, for me it's common to let creativity take over and allow myself to create new things. My area of expertise is software development, where since 2015 I have focused my studies in the area of native mobile development.

In addition to software development, I am also interested in other areas such as personal development, public speaking, project management and entrepreneurship. Areas where I had brief experience in the past.

As for my personality, I am a naturally observant, sincere person and I find it easy to learn new things, especially related to areas of interest to me.

Furthermore, I was involved in projects where I had the opportunity to work in a leadership position with people from different areas of knowledge. These opportunities allowed me to learn how to work better in a team, study and practice my speaking skills and deal with decision-making.

EXPERIENCES

(2023) Project Coordinator Center for Entrepreneurship Studies

- Participated in decision making
- Developed and delivered training
- Coordinated a team of six people on internal and external projects
